

SUSTAIN

In 2015, you saved the farm from the threat of development. Now we have the chance to secure the Farm's future and make sure this community resource will be here for generations to come.

WITH THE ALL-SEASONS BARN, WE CAN...

◆ Stabilize our financial model...

with the infrastructure to grow top-line farm revenues by 60% through year-round educational programming and events. We strive for sustainability, not only in the fields, but with our business model. This is exceedingly difficult to do when we are forced to shut down for 5 months every year. Not only will the Education center will allow us to run programs year-round, and add five months of revenue, but it will double the capacity for programming during the months we are already open.

◆ Take Critical Steps Towards Reducing our Environmental Impact

With the All Seasons Barn, we will have the opportunity to add solar panels and better rainwater capture and retention systems which can help provide more of the farm's inputs. This building will help us along our path to becoming a net zero operation.
